CAUTION

Be Aware

Now a days learners, Non Technical Blowers having no knowledge of science has started marketing glassware under name of BOROSILICATE GLASS. All glassware are made from Tubing by blowing. Such blowers make products from whatever Tube available without waiting for correct size from which international standard products can be made.

In the Manufacturing process at all the Manufacturers some items are produced non standard they are sold in the name of Borosilicate glass without Trade Mark, hence it is rejected you purchase.

Purchasers are in race of procuring cheapest glassware and hence such products has market but it is illusion, if breakage & all other aspects are considered it will cost more.

Customers are requested to insist for brand name on products such as BOROSIL, DURASIL, VENSIL, J-SIL, JSGW, LOBA, GLAXO, MERCK etc where in Manufacturer's brand names are printed on products. In case of any Quality complain you can know who is the supplier while Borosilicate can come from any manufacturers rejected product, or produce by learners.

This letter is written in the interest of purchaser who wish to know the Manufacturing process of glassware. Insists to purchase from M.S.M.E. Registered dealers & Manufacturer as per Govt. Circular.

CAT No.	Particulars	Price / Piece ₹
G-503-01	Manometer Anschutz Vacuum Gauge Bennert's with Stopcock and Sliding Wooden Stand with Mercury fitted,	7200.00

CAT NO. G-504**Mc CLEOD GAUGE (Vacustat) complete with Stand and Distilled Mercury**

This is extensively used where a portable and easily setup gauge is required.

Working instructions general :

The instrument vent fitted on stand is rotatable on its axis, When the big bulb is at the top side the position of the gauge is vertical. On rotation at 90° the big bulb comes to right hand side and will be called in horizontal position.

Mercury filled :

Through the glass tube pour mercury through barometer funnel after tilting the gauge in such a way that the whole of the mercury is accommodated in the bi reservoir bulb hereinafter called 'R'. Generally, the mercury is kept in the 'R'.

Connection to vacuum system :

There is connected vacuum system to the glass tube at the back.

Working :

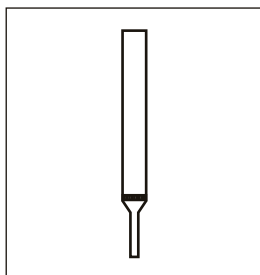

Start the vacuum pump while the gauge is in the horizontal position and the mercury is 'R'. When it is desired to measure the degree of vacuum rotate the gauge to the vertical position, the mercury will flow into the left hand glass tube again the scale which will directly show pressure of vacuum inside the system in Hg mm. The instrument gives direct reading of vacuum instantaneously. The mercury does not come in contact with rubber tubing so it is not polluted. No moving parts hence no wear and tear.

Precautions :

After taking the vacuum reading rotate the gauge to its horizontal position so that whole of the mercury comes to 'R'. The gauge is brought to vertical position when vacuum is to be observed.

STERISTOPPERS, GERMANY

STERISTOPPERS are manufactured by M/. Heinz Herenz, Hamburg, Germany who have 45 years of experience and specialities in laboratory consumables and hospital supplies. They are reputed for their own innovative designs and development activity having a number of patents and copyrights in their own name.

STERISTOPPERS are generally used as sealing for Microbiological and Tissue culture samples in test tubes, conical flasks, solution bottles. They replace traditional aluminium foils or cotton plugs which normally take considerable time to prepare. Besides, such sealings may not be full - proof from the point of view of contamination. Therefore, STERISTOPPERS answer all the problems associated with traditional sealings.

Some of the unique features of STERISTOPPERS are:

- Easy and immediate fixing.
- Active breathing for micro-organisms and bacteria as they are air permeable.

- No contamination from outside.
- A special manufacturing process makes them DRY sterilizable upto 200°C.
- Reusable after sterilization.
- Tight fitting to ensure airtight and dust-free working.
- Time and money saving.
- Also used for coving sharp pointed needles and instruments - specially for sterile sealing in pouches.

In addition to the sizes mentioned in this price list, there are many other sizes of STERISTOPPERS available which are suitable for different applications involving various kind of glassware and for other laboratory usage.

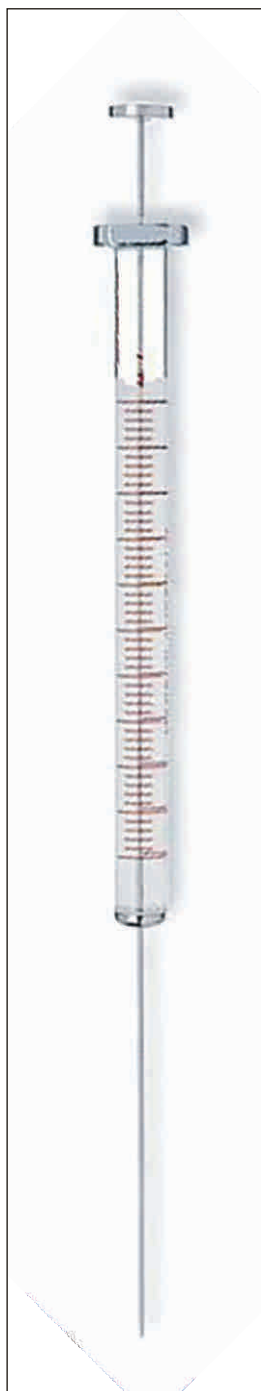

In order to select the correct size of STERISTOPPERS the internal diameter of the glassware would be relevant. Therefore, for sizes other than those mentioned in this price list, We request you to inform us the internal diameter of the neck of the glasswares in which the STERISTOPPERS are required to be fitted so that a proper size selection can be made by us before making our offer.

CAT NO. I-1251**ROTARY FLASK SHAKER**

Designed for continuous shaking of solutions in Erlenmeyer Flask from 100 to 250 ml capacity. It is compact bench type table Top model with platform fitted with rubber discs mounted on ball bearing crank shafts to give an orbital motion to the flasks, within a diameter of approximately 50mm. The motor is coupled by means of a V-belt with pitch pulley and is mounted on a heavy and sturdy angle iron frame. Speed is controlled by speed controller. To work in 220/230 Volts AC supply.

Most suitable to measure the diameter of the inhibited zone in microbiology, botany, zoology, bacteriology and pathology labs. The instrument is unique in design and measures the diameter of the inhibited zone within the range of 0 to 35 mm with an accuracy of 0.2 mm. Light from a source in the base passes up through the transparent and semitransparent portion of the agar, then to a reflecting mirror supported by an arm above the unit. The mirror reflects the light to a glass prism mounted at the front of the unit and the magnified image of the zone of inhibitions can be clearly seen on the prism. The instrument is supplied complete with all the required accessories like prism, petri dish, etc. The unit is suitable for operation on 230V, 50 Hz, Single phase AC supply.
